Name: Syed Mohammad Ibrahim

UID: iamibi

1. Identify one quality attribute of your software, and develop one quality scenario for this attribute (use the SEI quality scenario template provided in class slides)

Quality attribute	Quality Scenario name	Quality Scenario brief description	Quality Scenario utility (importance) to the users (Low = 1, Medium = 2, High = 3)	Estimated Quality Scenario development difficulty or risk (Difficult or high risk = 1, Medium difficulty or risk = 2, Rather easy and low risk = 3)	Scenario priority score (utility * difficulty)
Performance	Computation Time	The system shall compute grades and return relevant values to the user in <1s	1	3	3

2. Identify potential attackers for your software and their malicious goals
   Script kiddies and Motivated students interested in tampering with the course

3. Identify potential attackers for your software and their malicious goals

Script Kiddie	Admin

Performs a clickjacking on a legitimate user(s) to steal session information

Successfully steals the session information

Use the one-time session to login with that user

Successfully login with the session

Successfully login with the session

Tries to modify Flight Hours

Attempt Succeeds

Attempt Fail

Modifies the flight hours successfully

Fails to modify

End Session
